

FRONT

BACK

- 1 Don't roll down your windows for days after installation.**
- 2 Don't clean your new window film for days after installation.**

Why All the Fuss?

During installation, a trace of soapy solution always gets trapped behind the window film and needs a short period of time to completely dry before the adhesive can thoroughly bond to the glass. Dry time is determined by weather conditions and the type of window film installed. This is why your dealer has suggested the number of days to not roll down or clean your windows.

What to Expect

Shortly after installation completion, a slight moisture-haze may appear and it's also possible small water bubbles may collect. Do not worry this is normal – trapped moisture will always dry and disappear. However, if bubbles become excessive or persist, please do not attempt to pop or squeegee them out yourself. Return to your dealer for service.

Warning

All Global Window Films come standard with a durable scratch resistant coating, although you should always use a clean, non-abrasive cloth for cleaning and drying. To extend the life of your window film, please consider the following care tips on the reverse side of this card.

Your Business**

Care Tips

Cleaning Solutions

A mild soapy water solution works best. A few drops of liquid dish soap and tap water mixed in a spray bottle works very well, although most mild glass cleaning solutions are fine.

Cleaning Cloths

To minimize the risk of scratch damage to the films surface, always use non-abrasive materials and cloths that are free from contaminants.

Did you know?

Window film works even better at home. It's a fact - most people, having window film installed at home, first had their cars done. To discover the benefits of having window film installed at home, schedule a no obligation estimate today!
